

## NOMADS

Nomads and nomadism have been intimately linked to Silk Road trade and culture since ancient times (“nomad” derives from Greek *nomos*: “pasture”), and at the debut of the twenty-first century, still constitute a vital, if all too often endangered economic and social force in large parts of central Eurasia. From Siberian reindeer herders and Mongolian horsebreeders to Turkmen shepherds and Tibetan yak drivers, modern-day pastoralists preserve a way of life that embodies some of the Silk Road region’s most time-tested and ingenious traditions.

Marking the frontiers of the great civilizations of China, Iran, India, and Greece, the historical borders of the nomadic world have been indefinite and diffuse. Nomads and settled peoples have long existed in a complementary relationship, and in the history of trans-Eurasian trade and cultural exchange, nomads have been like blood vessels that circulated the oxygen of ideas and distributed new technologies and products along the Silk Road. Nomads can be proud of their historical achievements, which include movable dwellings, clothing suitable for riding horseback, felt and leather utensils, and the equine harness. They invented *kumiss* (fermented mare’s milk), the art of hunting with birds of prey, and bowed stringed instruments that are the ancestors of the cello and violin.

Nomadism on the steppes of Eurasia is thought to have originated around 3,000 years ago, at the end of the second millennium and the beginning of the first millennium BCE. It was not, however, the first source of human livelihood on the steppes. Archaeological evidence shows that migratory herding had been preceded by a complex livestock-raising and agricultural economy. Nomadism arose in response to ecological and climatic factors -- first and foremost, inadequate food and water resources -- when people who lived

predominantly by hunting first began to migrate in pursuit of the animals they hunted, following the seasonal migrations of wild mammals in Eurasia's arid steppe zone. In turn, selective breeding created an ecological niche that favored domesticated animals over their wild counterparts.

Present-day nomadic groups – Buryats, Kalmyks, Kazakhs, Kyrgyz, Mongols, Turkmens, Yakuts, to name a few – practice diverse types of stockbreeding and patterns of migration, belong to different religions, and speak many languages. At root, however, they represent two distinct linguistic groups, Turkic and Mongolian, and this binary distinction resonates in other aspects of nomadic culture. For example, the dwellings of Turkic nomads have spherical roofs while those of Mongolian groups have conic roofs. Turkic nomads orient the entrance of their dwelling to the east while among Mongolians, the entrance always faces south. Turkic nomads wear soft footwear, drink transparent tea, and slaughter sheep in a way that drains away the blood; Mongolian nomads wear hard footwear, drink tea mixed with milk, butter, salt, and flour, and slaughter sheep so as preserve the blood (which is made into blood sausage).

Nomad civilization has its own laws governing the organization of time and space, and nomads follow very sensitively the cycles of nature. In the words of one song, they are in continual pursuit of eternal spring. The primacy of movement serves as the basis of the nomads' entire worldview. For them, everything that is alive is in movement, and everything that moves is alive: the sun and moon, water and wind, birds, and animals.

The low fertility of the soil does not allow nomads and their herds to stay in a single area for a long time. Overgrazing can have dire results – at the extreme, removing pasturage from economic use for a period of years. In order to maximize the yield of a pasturage, nomads have to be able to judge on which exact day to drive their herds from one pasture

to the next, leaving the abandoned area to rejuvenate over the course of a year. Migration with livestock is an unavoidable fact of survival, and during the process of natural and forced selection, sheep, goats, cattle, camels, and horses have been selected for their suitability for lengthy migrations. Indeed, the symbol of nomadism is the horse, whose praise is sung in songs, epic tales, and stories. The winged flying horse, called by various names, e.g., *Tulpar*, *Jonon Khar*, like Pegasus of the ancient Greeks, is a beloved character of legends and a source of poetic inspiration.

At the earliest signs of spring, nomads drive their cattle to spring pastures where the animals give birth to their young, sheep have their spring dip, and are shorn. Spring is a time of hope and the beginning of the new cycle of life marked by the observance of the New Year, called *Nawruz* among the Turks and *Tsagan Sara* (lit. "white sacred month") among the Mongols. Without lingering long, nomads drive their animals on to summer pastures, where the happiest time of the nomadic year begins. Summer is a time of fattening for the animals characterized by an abundance of food, games and holidays for the young, and meetings with relatives as different migratory paths criss-cross. At the same time there are preparations for the hard winter ahead: sewing clothes, weaving rugs, beating felt. With the onset of the first cool days, nomads undertake their migration to fall pastures where they carry out the fall shearing of sheep and camels, the preparation of milk and meat for the winter, and the return to winter quarters.

This nomadic cycle, renewed from year to year, is not exactly the same each year, for the seasons themselves are not the same from one year to the next. Yet what remains constant for the nomad is the sensation of a natural rhythm of movement, stable forms of social organization, and abiding relationships among people. Success in nomadic life depends on mastery of a vast body of collective knowledge amassed over centuries. This knowledge,

passed on from father to son and mother to daughter, embraces an entire complex of tradecraft, domestic know-how, and moral norms.

A nomad's memory preserves thousands of sounds, colors and smells: the smell of smoke rising from the hearth of a yurt and flatbread frying in fat; felt and fluffy hides warming in the cold night; steppe grasses and flowers in the spring, especially wild tulips and irises; the bitter dust of fall and the fresh snow of winter. Those smells bring back memories of places where the senses received their first lessons in the never-ending variety of life.

Nomadism would be impossible without transportable dwellings, and among Eurasian nomads, evidence of such dwellings comes from ancient times. Describing the campaign of the Scythians against the Persian armies of Darius in the fifth century BCE, the Greek historian Herodotus mentions felt dwellings on carts. Herodotus's observation is echoed in the description of "felt Turkic carts" by Friar William of Rubruck, who as the envoy of Louis IX of France, traveled the Eurasian steppes in 1252-1254 on his voyage to Karakorum, then the capital of the Mongol empire. The carts that carried such felt homes were 30 feet wide and pulled by 33 pairs of oxen. While probably quite comfortable, such structures were cumbersome to transport, and could only be moved at a glacially slow pace.

The yurt is the universal dwelling of nomads in central Eurasia, and represents a unique achievement of human genius. As the name of a kind of dwelling, "yurt" entered general usage from Russian. In Central Asia itself "yurt" is a polysemous word that can mean "community," "family," "relatives," "people," "land," or "countryside." Turkic-speaking nomads call their dwellings *kiyiz üy*: "felt home." Mongolian speakers use the term *ger*.

For nomads, the yurt is rich in symbolism that represents both the macrocosmic and microcosmic world. Under the endless hemisphere of the sky, called *Tengri*, which is also

the name of God among nomadic animists, the yurt duplicates this hemisphere with the round opening of the smoke hole symbolizing the sun. Set on the emerald green grass of a mountains slope, covered with white felt and richly ornamented, the yurt suggests a bird alighting on the slope to rest. At first glance quite simple, the yurt is at the heart of the traditional nomadic world view. It provides a model and symbol of humanity and the universe, and is the key to understanding nomadic civilization.

*Only one who, after a long journey on a windy, gray winter evening has stepped into a warm, bright, spacious, radiantly colored yurt*

*Only one who, melting from the smoldering intensity of noon heat in summer when everything is silent and even time seems to stand still, enters the dry semi-darkness of a yurt*

*Only one who, after quickly washing up, falls onto the cool surface of a yurt's silken comforters and buries her head in an aromatic bowl of astringent, frothy cold kumiss*

*Only one who has awakened in the early morning from the joyous sensation of warm sunlight on her face and, shivering from the morning chill, emerges into the blooming steppe to meet the sun*

*Only such a person can appreciate the yurt in its full range and depth.*

Putting together a yurt is a magical act that for nomads represents the original creation: the transformation of Chaos into the Cosmos, Disorder into Order. Conversely, dismantling the yurt creates a reverse transformation. Each step in erecting a yurt has a symbolic meaning of which participants in the process are keenly aware. Moreover, the yurt has been anthropomorphized so that its parts are described by the same words used to name parts of the human body. For example, the center of the yurt where the hearth is located is known as the “navel”; walls are “thighs”; the interior of the lattice frame is the “womb”; the roof is called “shoulders;” the opening in the smoke hole is an “eye”; the wooden frame is called “bones” or “skeleton,” and the felt covering is “clothing.” Herders say that each

yurt has its own spirit, which is why guests bow their heads and pronounce greetings when entering a yurt, even if no one is home.

The inside of a yurt has a sacred character and is also imbued with its own symbolism. The spot opposite the entrance is the place of honor and is reserved for people who are closer to the Upper World by virtue of their social status, age, or artistic gifts. At the same time, this seat provides a vantage point from which the occupant can view the entire yurt, with men conventionally seated on the right side and women, on the left. The spot close to the door is for people considered to be closest to the Lower World, for example, the poor and the sick.

The center or “navel” of the yurt is the place of the hearth, which should never be crossed, even when no fire is burning. Violating this taboo may even be dangerous, as it can evoke retribution from the spirits. The hearth is a sacred territory, the place of fire over which the worldly axis passes as it unites the Upper, Middle, and Lower worlds. It is along this axis that life itself rotates, and in particular, the life of the inhabitants of the felt dwelling.

In their traditional daily lives, nomads do not know an unadorned space. All of their surroundings, beginning with the internal appointments of the yurt, are adorned or ornamented by their own skilled hands. To “ornament” is to domesticate, to turn an object into a part of one’s own cultural universe. Thus everything that is locally produced, from simple household necessities like drinking vessels and blankets to specially crafted items like horse harnesses and jewelry, represents an inviolable link between art and life.

Moreover, ornaments serve not simply as decoration, but comprise a special language that is essential knowledge for an understanding of nomadic arts.

From a tactile point of view, all the objects used by nomads in their daily lives exemplify the qualities of dryness and warmth. Leather is warm and dry, as are rugs, textiles, and

wood that have been worked. But the warmest of all is felt. One might even ask through what magical process felt preserves its warmth for what seems like thousands of years. A well-dressed felt withstands the merciless ravages of time and provides a link between the nomadic past and nomadic present.

The yurt is not just a place of residence, but a home full of life -- a place of daily work and rest, of festivities and holidays, of socializing and taking meals. The nomadic diet is high in protein, and consists mostly of meat and milk products. Such food provides the energy people need to engage in hard physical labor and symbolizes not only physical, but spiritual survival. The daily meal, with its symphony of tastes, customs, and rituals played and replayed in the life of every nomad since childhood, serves as a cornerstone of self-identity, and the shared meal is in its turn at the very epicenter of traditional nomadic culture. The ritual of seating guests around the yurt neatly sums up the social and familial relations of people in any given group, demonstrating hierarchy and priorities.

Nomadic hospitality rituals are strongly regulated and provide an opportunity to exchange news and for guests – at the behest of their host -- to talk about themselves, their travels, and events in the place where they live. Genealogical ties between hosts and guests are thoroughly discussed, and elders recount historical legends and stories. Among the means of communication particular to life on the steppe is a unique form of transmitting information known as the “long ear”: whatever is discussed around the *dastarqan* (tablecloth) can already be known the next day for hundreds of miles around. How, and by what means? Who knows!

Nomadic life is marked by eternal circles -- the circle of the sun, the open steppe, the circumference of the yurt, the horned circular scroll of ornaments, the life cycle of the *müshels* or “twelve-year animal cycle.” The completion of one circle leads to the

beginning of the next, and each moment of transition is consciously and carefully marked by the appropriate customs, rituals, and holidays. One of the turning points is *Nawruz* (Persian: “New Day”), as it is known among Central Asian Turks, the beginning of the calendar year that occurs on the vernal equinox, March 21-22.

Preparations for *Nawruz* begin early: homes are cleaned, new clothes are sewn. On the eve of *Nawruz*, nomads light bonfires and jump over them, young people wander about with lighted torches, women gather to cook large pots of a soup called *sumelak* or *Nawruz kozhe* made of seven ingredients -- water, salt, meat, wheat, millet, rice, and milk. Stirring the soup, they sing special songs and pronounce blessings. With the sunrise, they sit down to the first meal of the New Year, and as they eat, wish one another a long life. Then they call upon relatives, who await them in their yurts with spreads of delicious food. The holiday continues with horse competitions. At meals, elders are offered a boiled sheep's head, there are songs, and bards engage in verbal dueling competitions. Meanwhile, young people play games like “White Bone,” which consists of looking for a sheep’s tibia bone that has been thrown into the open steppe -- into a magical night full of laughter and freedom under a spring sky filled with stars.

The holiday has provided a short but joyous respite on the path of life, and as it recedes into memory, a new morning arises in the endless steppe, signifying yet another beginning, another rebirth. It is a rebirth in which nomads believe wholeheartedly, a rebirth that carries them through snowstorms and intense heat, losses and disappointments, betrayals and challenges, and all the tests of fate that lead to the future.
